Fort Wayne, Indiana, 46818. September 2008 – SWS-IDEC officially opens for business with an Open House.

SWS-Trimac, Inc. held an open house to commemorate the opening of its new facility SWS-IDEC (Indiana Development and Engineering Center). This facility was planned for, initially, in 2000 within the 10-year business plan.

This facility will be taking on the development function of new jobs. The usual steps include the creation of weld and assembly tooling and initial weld schedule settings. Small lot quantity jobs may be processed at IDEC to allow the Saginaw facility to concentrate on larger quantity production jobs.

Also taking place at this facility is research and engineering along with the quoting. Our engineering services include the redesign of weld joints to accommodate customer requirements.

This facility has allowed us to better serve the biomedical, automotive and aerospace industries. Fort Wayne is located in the biomedical hub.
